

Charging System Troubleshooting (Model 2816)

The Charging System Troubleshooting Trainer is a software program based on the Charging System and deals with the basic concepts of troubleshooting those automotive components. This program can operate in random mode where the faults are selected randomly for each circuit chosen, or the instructor can select a set of faults from various circuits to be activated as each student runs the program.

Features:

- Realistic operation of charging system.
- Built-in DVOM and Load Tester.
- Student performance is stored in Central Records or on a student disk as the student proceeds through the program.
- The IMP initializes the student record by assigning an I.D. number and password for the student to operate the program on the student computer.
- Audio reinforcement of circuit behavior.
- Network Version Available— Model 2816N

Activities Include:

- Troubleshooting section that will insert 19 possible faults into charging circuits to be diagnosed in the Training or Advanced Mode.
